1 Possible Applications, BTS Characteristics

The non-contacting thermal switch unit (BTS) is a monitoring system for Voith turbo couplings.

- The BTS provides easy monitoring of the turbo coupling temperature.
- **In case of excess temperature, dependent on the application,**
  - the operator can be warned,
  - the drive motor shutdown can be initiated,
  - the load on the driven machine can be reduced.
- If excess temperature is identified in time, the discharge or loss of coupling filling through the fusible plugs can be avoided.
  Downtimes are reduced.
- After the turbo coupling has cooled down, the BTS resets automatically.
- The BTS can be used for Voith turbo couplings from size 206.

**WARNING**

**Explosion hazard**
If no isolating switch amplifier is used, there is the hazard of explosion.
- As the control circuit of the evaluator is **not** intrinsically safe, provide an appropriate isolating switch amplifier between evaluator and initiator!
- The BTS must not be used as safety device to limit the maximum permissible surface temperature of the turbo coupling in potentially explosive atmospheres!
2 BTS Functioning

The non-contacting thermal switch unit (BTS) consists of three components:

- **Switching element**
- **Initiator** with mounting flange
- **Evaluator**

Optionally, if an intrinsically safe control circuit is required:

- **Isolating switch amplifier**, two-channel for up to 2 initiators

---

2.1 Switching element

The switching element is a passive component (ordinary electrical equipment). It is inserted into the outer wheel or into the turbo coupling shell. The result is a thermal contact between the switching element and the turbo coupling with the operating fluid. A coil and a thermostatic switch are integrated in the switching element. The switching point of the thermostatic switch corresponds to the response temperature of the switching element.

Below the nominal response temperature, the thermostatic switch is closed and bridges the coil. Above the nominal response temperature, the thermostatic switch opens and interrupts the circuit. When the temperature decreases, the thermostatic switch connects again the circuit. The BTS is again ready for service (it resets automatically).

2.2 Initiator

The initiator has been designed as polarized two-wire sensor. It works to the inductive sensor principle.

An electric oscillator is integrated in the initiator which produces a high-frequency oscillation. The oscillator has an oscillating circuit as element determining the frequency, comprising a coil and a capacitor.

The oscillating circuit coil is located in the sensor head. An electromagnetic alternating field leaves the sensor head via this coil.

2.3 Evaluator

The evaluator is an electronic unit recording the electric pulses and evaluating the period between the pulses.

The evaluation starts either by switching on the supply voltage or by an external trigger signal.

After starting the evaluation, monitoring of pulses must be interrupted for an adjustable period of time (start-up bypass time).

A relay with changeover contact will be released if the number of pulses per unit of time drops below a certain value.

2.4 Isolating switch amplifier

The isolating switch amplifier transmits digital signals from the potentially explosive area.

Sensors or mechanical contacts may work as transducing sensor.

The intrinsically safe inputs are safely isolated from the output and power system.
2.5 Interaction of BTS components

Instead of a blind screw, the switching element is screwed into the turbo coupling. The initiator with mounting flange is mounted parallel with the turbo coupling axis and is connected to the evaluator.

The coil inside the switching element is coupled inductively with the coil inside the initiator if the switching element is located in front of the initiator head. When the thermostatic switch is closed, energy is transmitted from the initiator to the switching element. The oscillator is attenuated and has a lower current consumption.

If the coupling temperature exceeds the response temperature of switching element, the thermostatic switch will interrupt the circuit in the switching element. The switching element can no longer attenuate the oscillator in the initiator.

The evaluator recognizes the attenuation of initiator due to the initiator current consumption.

If the turbo coupling with screwed in switching element rotates, then the switching element will permanently pass the initiator, thus permanently creating attenuation pulses. Thus, permanently attenuation pulses are generated. The output relay in the evaluator is energized.

In case of excess temperature, these attenuation pulses are not given, i.e. the cutoff frequency set on the evaluator is not reached. The evaluator recognizes the missing pulses, the output relay is de-energized.

On startup of the turbo coupling, a start-up bypass time is set at the evaluator. As long as the start-up bypass is active, the output relay remains energized. After this set time, the speed of the turbo coupling with the switching element must have exceeded the set cutoff frequency.

---

**WARNING**

**Risk of personal injuries and damage to property**

Following the shutdown, the control system has to be locked in a way that prevents automatic re-start.

- Switch off the unit in which the turbo coupling is installed and secure the switch against inadvertent switch-on.
- For all work performed on the turbo coupling and BTS ensure that both the drive motor and the driven machine have stopped running and that unintended starting is absolutely impossible!
- The coupling may only be restarted if the turbo coupling temperature is below the maximum permissible temperature allowed when switching on the motor!
3 Technical data

3.1 Switching element

The following switching elements are available for the different turbo coupling sizes:

<table>
<thead>
<tr>

4 User Information

This manual will support you in using the non-contacting thermal switch unit (BTS) in a safe, proper and economical way.

If you observe the information contained in this manual, you will
- increase the reliability and lifetime of the unit,
- avoid any risks
- reduce repairs and downtimes.

This manual must
- always be available at the BTS place of use,
- be read and used by every person who works on the unit or commissions the same.

You will find further documents which have to be regarded at any rate, in the annex.

The non-contacting thermal switch unit has been manufactured to the latest design standard and approved safety regulations. Nevertheless, the user’s or third party’s life may be endangered or the unit or other property impaired in case of improper handling or unintended use.

Spare parts:
Spare parts must comply with the technical requirements stipulated by Voith. This is ensured by using original spare parts.
Installation and/or use of non-original spare parts may negatively change the mechanical properties of the BTS and may thus impair safety.
Voith is not liable for any damages resulting from the use of non-original spare parts.

Use only appropriate workshop equipment for maintenance. Professional maintenance and/or repair can only be guaranteed by the manufacturer or an authorized specialist workshop.
This manual has been issued with utmost care. However, should you need any further information, please contact:

Voith Group

5 Safety

5.1 Safety information

Safety information indicating the descriptions and symbols as described in the following are used in the operating manual.

5.1.1 Structure of safety information

<table>
<thead>
<tr>
<th>DANGER WORD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Results of a hazardous situation</td>
</tr>
<tr>
<td>Source of hazard</td>
</tr>
<tr>
<td>• Warding off of danger</td>
</tr>
</tbody>
</table>

Danger word
The danger word divides the severity of the danger in several levels:

<table>
<thead>
<tr>
<th>Danger word</th>
<th>Severity of danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER</td>
<td>Death or serious injury (irreversible personal injury)</td>
</tr>
<tr>
<td>WARNING</td>
<td>Death or serious injury possible</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Minor or moderate injury possible</td>
</tr>
<tr>
<td>NOTICE</td>
<td>Possibly damage to property of - the product - its environment</td>
</tr>
<tr>
<td>SAFETY INFORMATION</td>
<td>General applications details, useful information, safe job procedure and proper safety measures</td>
</tr>
</tbody>
</table>

Table 2

Results of a hazardous situation
Hazard consequences indicate the kind of hazard.

Source of hazard
The source of hazard indicates the cause of hazard.

Warding off of danger
Warding off of danger describes the measures to be taken to ward off a danger.
5.1.2 Definition of safety symbols

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Definition</th>
</tr>
</thead>
</table>
| ![Ex symbol](image) | Explosion hazard  
Marking with the Ex-symbol indicates possible hazards which have to be observed for the use in potentially explosive atmospheres. |

Table 3

5.2 Intended use

- The non-contacting thermal switch unit (BTS) serves for the non-contacting temperature monitoring of Voith turbo couplings and has been designed for industrial applications. Any use beyond that described herein, e.g. for operating or application conditions that have not been agreed upon, is deemed unintended.
- Intended use also includes observing this installation and operating manual.
- The manufacturer is not liable for any damages resulting from unintended use. The risk has to be borne solely by the user.

5.3 Unintended use

- Design range is not met.
- Any use beyond that described herein, e.g. for higher powers, higher speeds, or operating conditions that have not been agreed upon, is deemed unintended.
- Moreover, it is not permitted to use BTS non-contacting thermal switch units or spare parts from third parties.

5.4 General information as to dangerous situations

For all work performed on the non-contacting thermal switch unit, please observe the local regulations for the prevention of accidents as well as the regulations for installation of electrical equipment!

**WARNING**

Explosion hazard

In case of non-compliance with the regulations or impermissible change, there is the risk of explosion.

- When using the non-contacting thermal switch unit in potentially explosive atmospheres, observe the local regulations applicable to electrical equipment in potentially explosive atmospheres! Changes on electrical equipment for potentially explosive atmospheres, including connecting lines, are not permitted.
Hazards while working on the non-contacting thermal switch unit:

**DANGER**

**Electric shock**

On account of incorrectly mounted or incorrectly connected electrical components, and disconnected electric connections, persons could get an electric shock and be severely injured, possibly with fatal consequences. Incorrectly mounted or incorrectly connected electrical components and disconnected electric connections may cause damages to the machinery.

- A qualified electrician has to properly carry out the connection to the electric supply network considering the system voltage and the maximum power consumption!
- The system voltage has to be in conformity with the system voltage indicated on the nameplate!
- There has to be a corresponding electrical protection by a fuse on the network side.

**Electrostatic processes**

Electrostatic charging may injure persons by an electric shock.

- Allow only a qualified electrician to install the equipment into which the turbo coupling is installed.
- The unit and the electrical installation are provided with ground connections.
Working on the turbo coupling:

**WARNING**

**Risk of injury**
While working on the turbo coupling, there is the risk of injury through cutting, crushing, burns and cold burns in case of minus degrees.
- Please observe the installation and operating manual of the turbo coupling!
- Never touch the turbo coupling without wearing protective gloves.
- Start to work on the turbo coupling only after it has cooled down.
- Ensure that there is sufficient light, a sufficiently large working space and good ventilation when working on the turbo coupling.
- Switch off the unit in which the turbo coupling is installed and secure the switch against inadvertent switch-on.
- For all work performed on the turbo coupling ensure that both the drive motor and the driven machine have stopped running and that unintended starting is absolutely impossible!

Noise:

**WARNING**

**Hearing loss, permanent impairment of hearing**
The turbo coupling generates noise during operation. If the A-classified equivalent sound pressure level $L_{PA,1m}$ exceeds 80 dB(A), this may cause impairment of hearing!
- Wear ear protection.
Operating fluid which sprays off or leaks out:

**WARNING**

**Risk of losing sight due to operating fluid spraying off, risk of burning**
In case of thermal overload of the turbo coupling, the fusible plugs respond. Operating fluid leaks out through these fusible plugs. This may happen only in case of unintended use.
- Persons close to the turbo coupling have to wear safety goggles.
- Please make sure that the spraying-off operating fluid cannot get in contact with persons.
- If the fusible plugs spray off, switch off the drive immediately.
- Electrical devices located near the turbo coupling need to be splash-guarded.

**WARNING**

**Fire hazard**
After the fusible plugs responded, spraying off oil may ignite on hot surfaces causing fire, as well as releasing toxic gases and vapor.
- Make sure that spraying off operating fluid cannot get into contact with hot machine parts, heaters, sparks or open flames.
- Immediately switch off the driving machine when the fusible plugs respond.
- Please pay attention to the information contained in the safety data sheets.

**CAUTION**

**Danger of slipping**
Slipping hazard due to spraying off solder of fusible plugs and leaking out operating fluid.
- Please provide a catch pan of sufficient size.
- Immediately remove any leaking out solder and operating fluid.
- Please pay attention to the information contained in the safety data sheets.
5.5 Remaining risks

**WARNING**

**Risk of personal injuries and damage to property**
Unintended use or incorrect operation may cause death, serious injuries or minor injuries as well as damage to property and the environment.

- Only persons who are sufficiently qualified, trained and authorized are allowed to work on or with the turbo coupling and the non-contacting thermal switch unit.
- Please observe the warnings and safety information.

5.6 What to do in case of accidents

**SAFETY INFORMATION**

- In case of accidents, please observe the local regulations, the operating manuals and the operator’s safety measures.

5.7 Information with regard to operation

**SAFETY INFORMATION**

- If irregularities are found during operation, immediately switch off the drive unit.

**Monitoring devices:**

**NOTICE**

**Damage to property**
Damage to turbo coupling due to monitoring devices not ready for service.

- Check whether existing monitoring devices are in a state ready for service.
- Repair any defective monitoring device immediately.
- Never bypass safety devices.
5.8 Qualification of staff

Only qualified and authorized professional staff are allowed to perform work, such as transportation, storage, installation, electrical connection, commissioning, operation, maintenance, servicing and repair.

Qualified professional staff in the sense of this installation and operating manual are persons who are familiar with transportation, storage, installation, electrical connection, commissioning, maintenance, service and repair, and who have the necessary qualifications for their job. Qualification has to be ensured by performing training and giving instructions.

This staff must be trained, instructed and authorized to:
- operate and service machines in a professional manner in accordance with the technical safety standards.
- use lifting appliances, slings (ropes, chains, etc.) and lifting points in a professional manner.
- properly dispose of media and their components, e.g. lubricating grease.
- service and use safety devices in a manner that ensures compliance with safety standards.
- prevent accidents and provide first aid.

Staff to be trained may only perform work on the turbo coupling and the non-contacting thermal switch unit under the supervision of a qualified and authorized person.

The staff in charge of any work to be done on the non-contacting thermal switch unit must
- be reliable,
- have the legal age,
- be trained, instructed and authorized with regard to the intended work,
- observe EN 1127-1 Annex A and EN 1127-1 Section 7 if the unit is installed in potentially explosive atmospheres. Use only tools which are approved for use in potentially explosive atmospheres. Avoid formation of sparks.

5.9 Product monitoring

We are under legal obligation to keep the performance of our products under observation, even after shipment. Therefore, please inform us about anything that might be of interest to us. For example:
- Change in operating data,
- experience gained with the machine,
- recurring problems,
- problems experienced with this installation and operating manual.
6 Installation

**WARNING**

*Risk of injury*
Please observe, in particular, → Chapter 5 (Safety) when working on the non-contacting thermal switch unit!

- Before beginning with the installation, ensure that an isolation of all components is guaranteed.
- The fusible plugs protect the turbo coupling against damage due to thermal overload.
  Even when the BTS is used, it is not allowed to replace the fusible plugs by blind screws or by fusible plugs with different nominal response temperatures!
- Never operate the turbo coupling without fusible plugs!

6.1 As delivered condition

- Normally, the switching element with sealing ring,
- the initiator with mounting flange and
- the evaluator
  are supplied as loose parts together with the turbo coupling.

6.2 Scope of supply

Please contact Voith Turbo in case of a subsequent installation of the BTS for turbo coupling sizes 206 and 274!

Standard combinations of switching elements and fusible plugs:

<table>
<thead>
<tr>
<th>Nominal response temperatures</th>
<th>Fusible plugs</th>
<th>Color coding</th>
</tr>
</thead>
<tbody>
<tr>
<td>160 °C</td>
<td>180 °C</td>

</tr>
</tbody>
</table>

Table 4
The correlation between switching element and fusible plug may vary dependent on the project design. Differing nominal response temperatures of the switching element (85°C, 90°C, 100°C, 110°C, 125°C, 140°C, 160°C and 180°C) are also available (→ Chapter 13).

6.3 Mounting - switching element and initiator

**WARNING**

Explosion hazard
Non-compliance with mounting instructions.
- To avoid any damages, switching element and initiator should be mounted after installation and prior to filling the turbo coupling.
- The switch unit and the connecting lines must not be damaged. Lay all lines protected against mechanical impact.
- It is not allowed to modify/change anything on equipment which is operated in potentially explosive atmospheres.
  It is not possible to carry out repairs on such equipment.
- Avoid any impact effects on the initiator. Work on the machine may only be performed in non-hazardous atmospheres.
- In order to prevent electrostatic charging, lay the connecting lines in accordance with EN 60079-14 and ensure that chafing during operation is not possible.

- Replace the blind screw by the switching element with the sealing ring in the turbo coupling outer wheel (item 0300) or shell (item 0190) 1).

Arrangement of switching element on the outer wheel side 2):

![Diagram](image)

Table 6

Please see the assembly plan of the turbo coupling for installation dimensions of deviating arrangements.
NOTICE

Damage to property
Non-compliance with mounting instructions.

• Ensure that the bracket is of sufficient stability (not included in Voith's scope of supply)!
• It is vital to avoid any vibrations as false signals might occur!
• Observe the metal-free area (15 mm) around the initiator head (⇒ schematic sketch below)!

Fig. 7

• Mount the initiator with mounting flange on the pitch circle diameter of the switching element and on a bracket, in parallel with the turbo coupling axis.
• Mount the initiator end flush with the mounting flange. Mount the mounting flange front flush with the bracket.
• Set the distance between initiator head and switching element to \( 4 \pm 1 \text{ mm} \)!
### 6.4 Mounting, connection - evaluator, isolating switch amplifier

**NOTICE**

**Damage to property**
Damage to the system by electric components not connected properly and/or not complying with the mounting instructions.

- Wiring of the BTS is not included in Voith’s scope of supply!
- In case of longer distances between initiator and evaluator, we recommend using a shielded cable for extension purposes.
- Total resistance of an extension cable between initiator and evaluator to be less than 100 Ω.

- Install the evaluator and, if necessary, the isolating switch amplifier into an appropriate cubicle and connect it/them in accordance with the wiring diagram.

Table 7
### WARNING

**Explosion hazard**
In case of non-compliance with the conditions for explosion protection, there is the risk of explosion.

- The control circuit of the evaluator is not intrinsically safe!
- If an intrinsically safe control circuit is required, provide an appropriate isolating switch amplifier between evaluator and initiator!

7 Display and Setting of Evaluator

7.1 Display - evaluator

Operating mode:

- Temperature OK
- normal operating mode

- Excess temperature
- Speed of switching element < 60 rpm

- Start-up bypass active
- No temperature monitoring!

Fig. 9

Setting mode:

- Setting of start-up bypass time

- Number of software version

Fig. 10
7.2 Setting - evaluator

- If required, set the start-up bypass time; setting at the factory: **10 s**! The pushbuttons on the front are used to set the time (see schematic sketch below).

**WARNING**

**Risk of personal injuries and damage to property**
During the start-up bypass time, an excess temperature of the turbo coupling is **not** recorded!
- Only persons who are sufficiently qualified, trained and authorized are allowed to work on or with the turbo coupling.
- Please observe the warnings and safety information.

**SAFETY INFORMATION**

- The start-up bypass time begins with triggering the start-up bypass.
- After the start-up bypass time, the speed of the turbo coupling with switching element should have clearly exceeded **60 rpm**!
- Factory setting of the start-up bypass time: **10 s**.

![Diagram of operating mode and setting mode with start-up bypass time and software version settings](image-url)
8 Commissioning

**WARNING**

**Risk of injury**

Please observe, in particular, → Chapter 5 (Safety) when working on the non-contacting thermal switch unit!

- A commissioning not performed properly could cause injury to persons, or harm to property and the environment!
- Experts only are allowed to perform commissioning, in particular, first starting of the turbo coupling!
- Secure the machine against unintentional switching on!

- Check the wiring according to **wiring diagram** (→ Chapter 6.4). Please pay special attention to the proper wiring of the supply voltage!
- Apply supply voltage to the evaluator, first without starting the turbo coupling. While the start-up by pass is active, the device displays ![wiring symbol]. The output relay is energized and the front LED lights up.
- After the start-up bypass time, the device displays ![wiring symbol]. The output relay is de-energized and the front LED extinguishes.
- If necessary, set the start-up bypass time according to → Chapter 7.2.
- In case of external triggering, remove the bridge that was fixed at the factory between terminals 2 and 3 on the evaluator.
- Start the BTS with turbo coupling in a normal way. After the start-up bypass time, the speed of the turbo coupling with switching element must have clearly exceeded **60 rpm**. The evaluator will display ![wiring symbol] if there is no excessive temperature. The output relay remains energized and the front LED lights up.
- Switch off the drive with the turbo coupling, leave the BTS in the mode ready for operation. If the speed of the turbo coupling with switching element drops below **60 rpm**, the evaluator displays ![wiring symbol]. The output relay is de-energized and the front LED extinguishes.
- Normal operation can start now. In case of malfunctions, → Chapter 10.
9 Maintenance, Servicing

Definition of the maintenance work described in the following (as per IEC 60079):

**Maintenance and Servicing:** A combination of all activities conducted in order to maintain an object in a condition or to re-store it to such a condition which meets the requirements of the respective specification and ensures performance of the required functions.

**Inspection:** An activity involving the thorough examination of an object in order to provide a reliable statement as to the condition of said object, performed without disassembly or, if necessary, with only partial disassembly, supplemented by measures such as the taking of measurements.

**Visual inspection:** A visual inspection is an inspection in which visible defects, such as missing screws or bolts, are identified without the use of access equipment or tools.

**Close-up inspection:** An inspection in which, in addition to the areas covered by the visual inspection, defects such as loose bolts, that can only be detected by using access equipment, e.g. mobile stair steps (if required) and tools are identified. For close-up inspections, usually a housing does not need to be opened or the power to the equipment be cut off.

**Detailed inspection:** An inspection in which, in addition to the areas covered by the close-up inspection, defects such as loose connections, that can only be detected by opening housings and/or using tools and test equipment (if required) are identified.

---

**WARNING**

**Risk of injury**

Please observe, in particular, → Chapter 5 (Safety) when working on the non-contacting thermal switch unit!

- Please always keep access paths free to the turbo coupling!

---

- Skilled and authorized persons only are allowed to carry out maintenance and repair work! Qualification is ensured by performing training and giving instructions on the turbo coupling.
- Possible consequences of improper servicing and maintenance could be death, serious or minor injuries, damage to property and harm to the environment.
- Switch off the unit in which the turbo coupling is installed and secure the switch against inadvertent switch-on.
- For all work performed on the turbo coupling ensure that both the drive motor and the driven machine have stopped running and that unintended starting is absolutely impossible!
- Components may only be replaced by original spare parts.

Re-mount all protective covers and safety devices in their original position immediately after completion of the servicing and maintenance work. Check them for proper functioning.

**Maintenance schedule:**

<table>
<thead>
<tr>
<th>Time</th>
<th>Maintenance work</th>
</tr>
</thead>
<tbody>
<tr>
<td>Every 1000 operating hours</td>
<td>Inspect the machine for irregularities (visual inspection, dust deposits).</td>
</tr>
<tr>
<td>every 6 months at the latest</td>
<td></td>
</tr>
<tr>
<td>6 months after commissioning, at</td>
<td>Check the electrical system for sound condition</td>
</tr>
<tr>
<td>the latest, then every 2 years</td>
<td>(detailed inspection).</td>
</tr>
<tr>
<td>In case of impurities</td>
<td>Cleaning (Chapter 9.1).</td>
</tr>
</tbody>
</table>

Table 9

- Carry out any maintenance work and routine inspections according to the report.
- Record the maintenance work carried out.
For explosion-proof turbo couplings, the following maintenance work needs to be carried out in addition:

<table>
<thead>
<tr>
<th>Maintenance intervals</th>
<th>Maintenance work</th>
</tr>
</thead>
<tbody>
<tr>
<td>In case of impurities or dusting:</td>
<td>Cleaning (→ Chapter 9.1).</td>
</tr>
<tr>
<td>Regularly clean equipment used in potentially explosive atmospheres. The intervals</td>
<td></td>

</tr>
<tr>
<td>equipment is exposed on the jobsite, e.g. in case of a dust accumulation of approx.</td>
<td></td>
</tr>
<tr>
<td>0.2 ... 0.5 mm or more.</td>
<td></td>
</tr>
</tbody>
</table>

### Table 10

**WARNING**

**Explosion hazard**

Explosion hazard due to maintenance work not performed according to schedule. It is vital to carry out all maintenance work according to the schedule in order to guarantee proper operation within the meaning of explosion-protection.

- Immediately remove any combustible layers of dust on the devices.

### 9.1 Outside cleaning

**NOTICE**

**Damage to property**

Damage to the BTS due to an improper, unsuitable outside cleaning.

- Ensure that the cleaning agent is compatible with the plastic housing of the BTS and the rubber seal of the cable connection!
- Do not use high-pressure cleaning equipment!
- Be careful with seals. Do not apply a water and compressed-air jet.

- Clean the BTS with a degreasing agent, as and when required.
10 Disposal

Disposal of the packaging
Dispose of packaging material according to the local regulations.

How to dispose of operating fluids
On disposal, please observe the applicable laws and the producer's or supplier's instructions.

How to dispose of the BTS
Dispose of the BTS according to the local regulations.

For special information on the disposal of the substances and materials used, please see the following table:

<table>
<thead>
<tr>
<th>Material / substance</th>

11 Malfunctions - Remedial Actions, Troubleshooting

**WARNING**

**Risk of injury**
Please observe, in particular, → Chapter 5 (Safety) when working on the non-contacting thermal switch unit!

**WARNING**

**Explosion hazard**
It is not allowed to modify/change anything on equipment/devices which are operated in potentially explosive atmospheres.
• Repairs are not permitted; repair the device.

The following table is intended to help finding the cause of malfunctions or problems quickly and to take remedial action, if necessary.

<table>
<thead>
<tr>
<th>Malfunction</th>
<th>Possible cause(s)</th>

<td></td>
</tr>
</tbody>
</table>
Malfunction Possible cause(s) Remedial action See
--- --- --- ---
After the start-up by-pass time, operating fluid is leaking through the fusible plugs, the BTS did not display any excessive temperature. The nominal response temperatures of switching element and fusible plugs do not match. Please contact Voith. Chapter 12

The switching element is defective. Check the switching element, and replace it, if necessary.

Please consult Voith (→ Chapter 12), if a malfunction occurs which is not included in this table.

Table 12

**In order to determine the cause of failure more precisely, the following measures should be taken in the corresponding order:**

<table>
<thead>
<tr>
<th>Measurement</th>
<th>Result</th>
<th>Probable troubleshooting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apply supply voltage to the evaluator. Measure the no-load voltage and the short-circuit current at the NAMUR input (terminals 9 and 8).</td>

<td>Defective initiator.</td>
</tr>
<tr>
<td>Attenuate the initiator, after proper installation, with the switching element, with the turbo coupling not being overheated.</td>
<td>Current consumption &gt; 1.2 mA and &lt; 6.0 mA</td>
<td>Defective switching element.</td>
</tr>
</tbody>
</table>

Table 13
12 Queries, Orders Placed for Field Service Engineers and Spare Parts

For

- queries
- Ordering a field service engineer
- Ordering spare parts
- commissionings

we need:

- the Serial No. and type designation of the turbo coupling on which the BTS is used.
  - You will find the serial number and type designation either on the outer wheel / coupling shell (A) or on the turbo coupling periphery (B).
  - The serial number is stamped in with figure stamps.
  - For turbo couplings, intended for the use in potentially explosive atmospheres, you will find the CE-Ex marking on the turbo coupling periphery.

When placing an order for a field service representative, commissioning or a service, we need, in addition

- the turbo coupling installation site,
- the name and address of a contact person,
- details of the malfunction/problem occurred.

When placing a spare parts order, we need, in addition,

- the shipping address for the spare parts shipment.
13 Spare Parts Information

**NOTICE**

Unauthorized changes or retrofits are not allowed to be performed on the coupling!
Do not retrofit accessories or equipment originating from other manufacturers!
Any changes or conversions performed without the prior written consent of Voith Turbo will result in the loss of any warranty! Any claims will forfeit!
- Professional maintenance or repair can only be guaranteed by the manufacturer!

Validity
Specific processes and instructions in this document require special precautions to guarantee the safety of the operating personnel.

Target group, personnel
Responsibility for planning, assembly, commissioning, operation, maintenance, and dismounting lies with the plant operator. Mounting, installation, commissioning, operation, maintenance and disassembly of any devices may only be carried out by trained, qualified personnel. The instruction manual must be read and understood.

Reference to further documentation
Observe laws, standards, and directives applicable to the intended use and the operating location. Observe Directive 1999/92/EC in relation to hazardous areas. The corresponding datasheets, declarations of conformity, EC-type-examination certificates, certificates and control drawings if applicable (see datasheet) are an integral part of this document. You can find this information under www.pepperl-fuchs.com. Due to constant revisions, documentation is subject to permanent change. Please refer only to the most up-to-date version, which can be found under www.pepperl-fuchs.com.

Intended use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.

Range of application
Manual electrical apparatus for hazardous areas

Range of application 1D
for use in hazardous areas with combustible dust

Range of application 2G
for use in hazardous areas with gas, vapour and mist

Improper use
Protection of the personnel and the plant is not ensured if the product is not being used according to its intended use.

Mounting and installation
Prior to mounting, installation and commissioning of the device you should make yourself familiar with the device and carefully read the instruction manual. Mount the device so that it is not exposed to any mechanical hazard. For example, mount the device in a protective housing.

Range of application 1D
Electrostatic charge
The connection cables are to be laid in accordance with EN 50281-1-2 and must not normally be subjected to chaffing during use.

Range of application 2G
Protection from mechanical danger
When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.

Operation, maintenance, repair
The device must not be repaired, changed or manipulated. In the event of a fault, always return the device to Pepperl+Fuchs. If there is a defect, the device must always be replaced with an original device from Pepperl+Fuchs.

Delivery, transport, disposal
Check the packaging and contents for damage. Check if you have received every item and if the items received are the ones you ordered. Keep the original packaging. Always store and transport the device in the original packaging. Store the device in a clean and dry environment. The permitted ambient conditions (see datasheet) must be considered. Disposing of device, packaging material, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.
Technical Data

General specifications
- Switching function: Normally closed (NC)
- Output type: NAMUR
- Rated operating distance $d_1$: 10 mm
- Installation: non-flush
- Assured operating distance $d_2$: 0 ... 10 mm

Nominal ratings
- Nominal voltage: $U_0 = 8\, \text{V}$
- Switching frequency: $f = 0 \ldots 1000\, \text{Hz}$
- Hysteresis: $H$ typ. 5 \%
- Current consumption: $\geq 3\, \text{mA}$
- Measuring plate not detected: $\geq 1\, \text{mA}$

Ambient conditions
- Ambient temperature: $-40 \ldots 70\, ^\circ\text{C} \, (-40 \ldots 158\, ^\circ\text{F})$

Mechanical specifications
- Connection type: cable silicone, 2 m
- Core cross-section: 0.75 mm$^2$
- Housing material: PBT
- Sensing face: PBT
- Degree of protection: IP68
- Bending radius: $> 10 \times \text{cable diameter}$

Compliance with standards and directives
- Use in the hazardous area: see instruction manuals
- Category: 2G, 1D

Approval and certificates
- UL approval: cULus Listed, General Purpose
- CSA approval: cCSA-US Listed, General Purpose

Inductive sensor

NJ10-22-N-E93-Y106925

Model Number

NJ10-22-N-E93-Y106925

Features

- Comfort series
- 10 mm non-flush
Equipment protection level Gb

Instruction

Device category 2G
EC-Type Examination Certificate
CE marking

ATEX marking

Standards
EN 60079-0:2012, EN 60079-11:2012
Ignition protection "Intrinsic safety"
Use is restricted to the following stated conditions
NJ 10-22-N...

Appropriate type
Effective internal inductivity $C_i$
Effective internal inductance $L_i$
General

$\leq 130 \text{ nF}$; a cable length of 10 m is considered.
$\leq 100 \text{ mH}$; a cable length of 10 m is considered.
The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EU-type examination certificate has to be observed. The special conditions must be adhered to!
The ATEX directive and therefore the EU-type examination certificates apply in general only to the use of electrical apparatus under atmospheric conditions.
The use in ambient temperatures of $> 60^\circ \text{C}$ was tested with regard to hot surfaces by the mentioned certification authority.
If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration.
The temperature ranges, according to temperature class, are given in the EC-Type Examination Certificate.

Maximum permissible ambient temperature $T_{\text{amb}}$

Installation, commissioning

Laws and/or regulations and standards governing the use or intended usage must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety.

Maintenance

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

Special conditions

Protection from mechanical danger

When used in the temperature range below -20 $^\circ \text{C}$ the sensor should be protected from knocks by the provision of an additional housing.

Standards

IEC 61241-11:2002; draft, prEN61241-0:2002

type of protection intrinsic safety “ID”

Use is restricted to the following stated conditions

NJ 10-22-N-E93-Y106925

Appropriate type

NJ 10-22-N-E93-Y106925

Effective internal inductivity C_i

≤ 130 nF; a cable length of 10 m is considered.

Effective internal inductance L_i

≤ 100 µH; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet

and in this instruction manual.

The EU-type examination certificate has to be observed.

The special conditions must be adhered to!

Maximum housing surface temperature

The maximum surface temperature of the housing is given in the EC-Type Examination Certificate.

Installation, commissioning

Laws and/or regulations and standards governing the use or intended usage goal must be observed.

The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety.

The associated apparatus must satisfy at least the requirements of category ia II B or ia D. Because of the possibility of the danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation in the power supply and signal circuits is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met. The intrinsically safe circuit has to be protected against influences due to lightning.

When used in the isolating wall between Zone 20 and Zone 21 or Zone 21 und Zone 22 the sensor must not be exposed to any mechanical danger and must be sealed in such a way, that the protective function of the isolating wall is not impaired. The applicable directives and standards must be observed.

Maintenance

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

Special conditions

Electrostatic charge

The connection cables are to be laid in accordance with EN 50281-1-2 and must not normally be subjected to chaffing during use.

Pepperl+Fuchs GmbH declares that the products are only affected by minor or formal changes with respect to the new edition of the standards. These changes are not relevant for compliance with the essential health and safety requirements. The products still comply with the ATEX Directive. This declaration is also valid if the marking and the certificates of the listed devices correspond to previous editions of standards.

Validity

Specific processes and instructions in this document require special precautions to guarantee the safety of the operating personnel.

Target group, personnel

Responsibility for planning, assembly, commissioning, operation, maintenance, and dismantling lies with the plant operator. Mounting, installation, commissioning, operation, maintenance and disassembly of any devices may only be carried out by trained, qualified personnel. The instruction manual must be read and understood.

Reference to further documentation

Observe laws, standards, and directives applicable to the intended use and the operating location. Observe Directive 1999/92/EC in relation to hazardous areas. The corresponding datasheets, declarations of conformity, EC-type-examination certificates, certificates and control drawings if applicable (see datasheet) are an integral part of this document. You can find this information under www.pepperl-fuchs.com. Due to constant revisions, documentation is subject to permanent change. Please refer only to the most up-to-date version, which can be found under www.pepperl-fuchs.com.

Intended use

The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.

Range of application

Manual electrical apparatus for hazardous areas

Range of application 1D
for use in hazardous areas with combustible dust

Range of application 2G
for use in hazardous areas with gas, vapour and mist

Improper use

Protection of the personnel and the plant is not ensured if the product is not being used according to its intended use.

Mounting and installation

Prior to mounting, installation and commissioning of the device you should make yourself familiar with the device and carefully read the instruction manual. Mount the device so that it is not exposed to any mechanical hazard. For example, mount the device in a protective housing.

Range of application 1D

Electrostatic charge
The connection cables are to be laid in accordance with EN 50281-1-2 and must not normally be subjected to chaffing during use.

Range of application 2G

Protection from mechanical danger
When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.

Operation, maintenance, repair

The device must not be repaired, changed or manipulated. In the event of a fault, always return the device to Pepperl+Fuchs. If there is a defect, the device must always be replaced with an original device from Pepperl+Fuchs.

Delivery, transport, disposal

Check the packaging and contents for damage. Check if you have received every item and if the items received are the ones you ordered. Keep the original packaging. Always store and transport the device in the original packaging. Store the device in a clean and dry environment. The permitted ambient conditions (see datasheet) must be considered. Disposing of device, packaging material, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.
## Technical Data

### General specifications
- **Switching function**: Normally closed (NC)
- **Output type**: NAMUR
- **Rated operating distance** $s_n$: 10 mm
- **Installation**: non-flush
- **Assured operating distance** $s_a$: 0 ... 9 mm

### Nominal ratings
- **Nominal voltage** $U_0$: 8 V
- **Switching frequency** $f$: 0 ... 1300 Hz
- **Hysteresis** $H$: typ. 5 %
- **Current consumption**
  - Measuring plate not detected: $\geq 3 \text{ mA}$
  - Measuring plate detected: $\leq 1 \text{ mA}$

### Ambient conditions
- **Ambient temperature**: -25 ... 100 °C (-13 ... 212 °F)

### Mechanical specifications
- **Connection type**: cable silicone , 2 m
- **Core cross-section**: 0.75 mm$^2$
- **Housing material**: PBT
- **Sensing face**: PBT
- **Degree of protection**: IP68
- **Bending radius**: $> 10 \times$ cable diameter

### General information
- **Use in the hazardous area**: see instruction manuals
- **Category**: 2G, 1D

### Compliance with standards and directives
- **NAMUR**: EN 60947-5-6-2000
  - IEC 60947-5-6-1999
- **Standards**: EN 60947-5-2:2007
  - IEC 60947-5-2:2007

### Approvals and certificates
- **UL approval**: cULus Listed, General Purpose
- **CSA approval**: cCULus Listed, General Purpose

EN 60079-0:2012, EN 60079-11:2012

Ignition protection "Intrinsic safety"

Use is restricted to the following stated conditions:

NJ 10-22-N...

\( \leq 130 \) nF; a cable length of 10 m is considered.

\( \leq 100 \) mH; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EU-type examination certificate has to be observed. The special conditions must be adhered to!

The ATEX directive and therefore the EU-type examination certificates apply in general only to the use of electrical apparatus under atmospheric conditions.

The use in ambient temperatures of \( > 60 \) °C was tested with regard to hot surfaces by the mentioned certification authority.

If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration.

The temperature ranges, according to temperature class, are given in the EC-Type Examination Certificate.

When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.
Equipment protection level Da

Instruction

Manual electrical apparatus for hazardous areas

for use in hazardous areas with combustible dust

ZELM 03 ATEX 0128 X

C E 61202

ATEX marking

II 1D Ex iaD 20 T 85 °C (185 °F)

Standards

IEC 61241-11:2002; draft prEN 61241-0:2002

type of protection intrinsic safety “ID”

Use is restricted to the following stated conditions

NJ 10-22-N-E93-Y30629

Appropriate type

NJ 10-22-N-E93-Y30629

Effective internal inductivity L_{i}

≤ 130 mF; a cable length of 10 m is considered.

Effective internal inductance L_{i}

≤ 100 μH; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet

and in this instruction manual.

The EU-type examination certificate has to be observed.

The special conditions must be adhered to!

Maximum housing surface temperature

The maximum surface temperature of the housing is given in the EC-Type Examination

Certificate.

Installation, commissioning

Laws and/or regulations and standards governing the use or intended usage goal

must be observed.

The intrinsic safety is only assured in connection with an appropriate related appara-

tus and according to the proof of intrinsic safety.

The associated apparatus must satisfy at least the requirements of category IIB or

IaD. Because of the possibility of the danger of ignition, which can arise due to faults

and/or transient currents in the equipotential bonding system, galvanic isolation in

the power supply and signal circuits is preferable. Associated apparatus without

electrical isolation must only be used if the appropriate requirements of IEC 60079-

14 are met.

The intrinsically safe circuit has to be protected against influences due to lightning.

When used in the isolating wall between Zone 20 and Zone 21 or Zone 21 und Zone

22 the sensor must not be exposed to any mechanical danger and must be sealed in

such a way, that the protective function of the isolating wall is not impaired. The appli-
cable directives and standards must be observed.

Maintenance

No changes can be made to apparatus, which are operated in hazardous areas.

Repairs to these apparatus are not possible.

Special conditions

Electrostatic charge

The connection cables are to be laid in accordance with EN 50281-1-2 and must not

normally be subjected to chaffing during use.
EU-Declaration of conformity

Pepperl+Fuchs GmbH declares that the products are only affected by minor or formal changes with respect to the new edition of the standards. These changes are not relevant for compliance with the essential health and safety requirements. The products still comply with the ATEX Directive. This declaration is also valid if the marking and the certificates of the listed devices correspond to previous editions of standards. The changes are not relevant for the ATEX Directive. This declaration is also valid if the marking and the certificates of the listed devices correspond to previous editions of standards. Die Pepperl+Fuchs GmbH erklärt hiermit, dass die Produkte nur von kleineren oder formalen Änderungen in Bezug auf die neue Ausgabe der Normen betroffen sind. Diese Änderungen sind nicht relevant für die Konformität mit den wesentlichen Gesundheits- und Sicherheitsanforderungen. Die Produkte erfüllen nach wie vor die ATEX-Richtlinie. Diese Erklärung gilt auch, wenn die Kennzeichnung und die Zertifikate der aufgeführten Geräte vorangegangenen Normenständen entsprechen.

Pepperl+Fuchs GmbH
Lilienthalstraße 200, 68307 Mannheim, Germany

2. Validity
Specific processes and instructions in this instruction manual require special provisions to guarantee the safety of the operating personnel.

3. Target Group, Personnel
Responsibility for planning, assembly, commissioning, operation, maintenance, and dismounting lies with the plant operator.

4. Reference to Further Documentation
Observe laws, standards, and directives applicable to the intended use and the operating location. Observe Directive 1999/92/EC in relation to hazardous areas.

5. Intended Use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.

6. Improper Use
Protection of the personnel and the plant is not ensured if the device is not used according to its intended use.

7. Mounting and Installation

7.1. Requirements for Usage as Intrinsicly Safe Apparatus
When connecting intrinsically safe devices with intrinsically safe circuits of associated apparatus, observe the maximum peak values with regard to explosion protection (verification of intrinsic safety). Observe the standards IEC/EN 60079-14 or IEC/EN 60079-25.

7.2. Special Conditions
Mount the device so that it complies with the specified degree of protection according to IEC/EN 60529.

7.2.2. Requirements to Mechanics

7.2.2.1. Requirements for Usage as Intrinsicly Safe Apparatus
Protect the device from impact effects by mounting in a surrounding enclosure if it is used in the temperature range between the minimum permissible ambient temperature and -20 °C.

8. Operation, Maintenance, Repair
Observe the special conditions. Safety-relevant markings are found on the nameplate of the device or the nameplate supplied.

8.1. Requirements for Usage as Intrinsicly Safe Apparatus
Only operate the device with intrinsically safe circuits according to IEC/EN 60079-11.

8.2. Requirements for Equipment Protection Level Gb

8.3. Requirements for Equipment Protection Level Da

5.3. Requirements for Equipment Protection Level Mb
Refer to the relevant certificate to see the relationship between the connected circuit type, the maximum permitted ambient temperature, the effective inner reactances, and if applicable the surface temperature or the temperature class.

The suitability for use of the device at ambient temperatures > 60 °C in conjunction with hot surfaces has been checked by the notified body.
8.4. Requirements for Equipment Protection Level Mb

Observe the temperature table for the corresponding equipment protection level in the certificate.
Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.

9. Delivery, Transport, Disposal

Check the packaging and contents for damage.
Check if you have received every item and if the items received are the ones you ordered.
Keep the original packaging. Always store and transport the device in the original packaging.
Store the device in a clean and dry environment. The permitted ambient conditions must be considered, see datasheet.
Disposing of device, packaging, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.

Pepperl+Fuchs GmbH
Lilienthalstraße 200, 68307 Mannheim, Germany

2. Validity

Specific processes and instructions in this instruction manual require special provisions to guarantee the safety of the operating personnel.

3. Target Group, Personnel

Responsibility for planning, assembly, commissioning, operation, maintenance, and dismounting lies with the plant operator.

The personnel must be appropriately trained and qualified in order to carry out mounting, installation, commissioning, operation, maintenance, and dismounting of the device. The trained and qualified personnel must have read and understood the instruction manual.

4. Reference to Further Documentation

Observe laws, standards, and directives applicable to the intended use and the operating location. Observe Directive 1999/92/EC in relation to hazardous areas.

The corresponding datasheets, manuals, declarations of conformity, EU-type examination certificates, certificates, and control drawings if applicable (see datasheet) are an integral part of this document. You can find this information under www.pepperl-fuchs.com.

Due to constant revisions, documentation is subject to permanent change. Please refer only to the most up-to-date version, which can be found under www.pepperl-fuchs.com.

5. Intended Use

The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.

Technical data provided in the datasheet may be partly restrained by the information given in this instruction manual.

Use the device only within the specified ambient and operating conditions. The device is an electrical apparatus for hazardous areas. The device can be used in hazardous areas containing gas, vapor, and mist.

The device can be used in hazardous areas containing combustible dust. The device can be used in underground parts of mines as well as those parts of surface installations of such mines containing firedamp and/or combustible dust.

The certificate applies only to the use of apparatus under atmospheric conditions. If you use the device outside atmospheric conditions, consider that the permissible safety parameters should be reduced.

5.1. Requirements for Equipment Protection Level Gb

Refer to the relevant certificate to see the relationship between the connected circuit type, the maximum permitted ambient temperature, the effective inner reactances, and if applicable the surface temperature or the temperature class.

The suitability for use of the device at ambient temperatures > 60 °C in conjunction with hot surfaces has been checked by the notified body.

5.2. Requirements for Equipment Protection Level Da

Refer to the relevant certificate to see the relationship between the connected circuit type, the maximum permitted ambient temperature, the effective inner reactances, and if applicable the surface temperature or the temperature class.

The suitability for use of the device at ambient temperatures > 60 °C in conjunction with hot surfaces has been checked by the notified body.

5.3. Requirements for Equipment Protection Level Mb

Refer to the relevant certificate to see the relationship between the connected circuit type, the maximum permitted ambient temperature, the effective inner reactances, and if applicable the surface temperature or the temperature class.

The suitability for use of the device at ambient temperatures > 60 °C in conjunction with hot surfaces has been checked by the notified body.

6. Improper Use

Protection of the personnel and the plant is not ensured if the device is not used according to its intended use.

7. Mounting and Installation

Observe the installation instructions according to IEC/EN 60079-14. Safety-relevant markings are found on the nameplate of the device or the nameplate supplied.

Attach the nameplate supplied in the immediate vicinity of the device. Attach the nameplate so that it is legible and indelible. Take the ambient conditions into account.

Do not mount a damaged or polluted device. Mount the device so that it complies with the specified degree of protection according to IEC/EN 60529.

If you use the device in environments subject to adverse conditions, you must protect the device accordingly.

Do not remove the warning markings.

7.1. Requirements for Usage as Intrinsically Safe Apparatus

When connecting intrinsically safe devices with intrinsically safe circuits of associated apparatus, observe the maximum peak values with regard to explosion protection (verification of intrinsic safety). Observe the standards IEC/EN 60079-14 or IEC/EN 60079-25.

The type of protection is determined by the connected intrinsically safe circuit.

Mount the device with at least a degree of protection of IP20 according to IEC/EN 60529.

7.2. Special Conditions

Mount the device so that it complies with the specified degree of protection according to IEC/EN 60529.

7.2.1. Requirements in Relation to Electrostatics

Information on electrostatic hazards can be found in the technical specification IEC/TS 60079-32-1.

7.2.1.1. Requirements for Equipment Protection Level Da

Avoid electrostatic charges which could result in electrostatic discharges while installing or operating the device.

Do not mount the supplied nameplate in areas that can be electrostatically charged.

7.2.2. Requirements to Mechanics

7.2.2.1. Requirements for Usage as Intrinsically Safe Apparatus

Protect the device from impact effects by mounting in a surrounding enclosure if it is used in the temperature range between the minimum permissible ambient temperature and -20 °C.

Mount the device with at least a degree of protection of IP20 according to IEC/EN 60529.

8. Operation, Maintenance, Repair

Observe the special conditions. Safety-relevant markings are found on the nameplate of the device or the nameplate supplied.

Do not use a damaged or polluted device.

Do not repair, modify, or manipulate the device.

Modifications are permitted only if approved in this instruction manual.

If there is a defect, always replace the device with an original device.

Do not remove the warning markings.

8.1. Requirements for Usage as Intrinsically Safe Apparatus

Only operate the device with intrinsically safe circuits according to IEC/EN 60079-11.

The type of protection is determined by the connected intrinsically safe circuit.

8.2. Requirements for Equipment Protection Level Gb

Observe the temperature table for the corresponding equipment protection level in the certificate.

Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.

8.3. Requirements for Equipment Protection Level Da

Observe the temperature table for the corresponding equipment protection level in the certificate.

Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.
8.4. Requirements for Equipment Protection Level Mb
Observe the temperature table for the corresponding equipment protection level in the certificate.
Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.

9. Delivery, Transport, Disposal
Check the packaging and contents for damage.
Check if you have received every item and if the items received are the ones you ordered.
Keep the original packaging. Always store and transport the device in the original packaging.
Store the device in a clean and dry environment. The permitted ambient conditions must be considered, see datasheet.
Disposing of device, packaging, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.
**Model Number**

NJ10-22-N-E93-Y246868

### Ambient conditions

- Ambient temperature: -40 ... 100 °C (-40 ... 212 °F)
  - Also observe the maximum permissible ambient temperature stated in the data for application in connection with hazardous areas.
  - Keep to the lower of the two values.

### Mechanical specifications

- Connection type: cable silicone, 5 m
- Core cross-section: 0.75 mm²
- Housing material: PBT
- Sensing face: PBT
- Degree of protection: IP68
- Cable bending radius: > 10 x cable diameter

### Compliance with standards and directives

- Standard conformity:
  - NAMUR EN 60947-5-6:2000
  - IEC 60947-5-6:1999
- Standards:
  - EN 60947-5-2:2007
  - EN 60947-5-2/A1:2012
  - IEC 60947-5-2:2007
  - IEC 60947-5-2 AMD 1:2012

### Approvals and certificates

- EAC conformity: TR CU 012/2011
- UL approval: cULus Listed, General Purpose

5.3. Requirements for Equipment Protection Level Mb

Refer to the relevant certificate to see the relationship between the connected circuit type, the maximum permitted ambient temperature, the effective inner reactances, and if applicable the surface temperature or the temperature class.

The suitability for use of the device at ambient temperatures > 60 °C in conjunction with hot surfaces has been checked by the notified body.

6. Improper Use

Protection of the personnel and the plant is not ensured if the device is not used according to its intended use.

7. Mounting and Installation

Observe the installation instructions according to IEC/EN 60079-14. Safety-relevant markings are found on the nameplate of the device or the nameplate supplied.

Attach the nameplate supplied in the immediate vicinity of the device. Attach the nameplate so that it is legible and indelible. Take the ambient conditions into account.

Do not mount a damaged or polluted device.

Mount the device so that it complies with the specified degree of protection according to IEC/EN 60529.

If you use the device in environments subject to adverse conditions, you must protect the device accordingly.

Do not remove the warning markings.

7.1. Requirements for Usage as Intrinsically Safe Apparatus

When connecting intrinsically safe devices with intrinsically safe circuits of associated apparatus, observe the maximum peak values with regard to explosion protection (verification of intrinsic safety). Observe the standards IEC/EN 60079-14 or IEC/EN 60079-25.

The type of protection is determined by the connected intrinsically safe circuit.

Mount the device with at least a degree of protection of IP20 according to IEC/EN 60529.

7.2. Special Conditions

Mount the device so that it complies with the specified degree of protection according to IEC/EN 60529.

7.2.1. Requirements in Relation to Electrostatics

Information on electrostatic hazards can be found in the technical specification IEC/TS 60079-32-1.

7.2.1.1. Requirements for Equipment Protection Level Da

Avoid electrostatic charges which could result in electrostatic discharges while installing or operating the device.

Do not mount the supplied nameplate in areas that can be electrostatically charged.

7.2.2. Requirements to Mechanics

7.2.2.1. Requirements for Usage as Intrinsically Safe Apparatus

Protect the device from impact effects by mounting in a surrounding enclosure if it is used in the temperature range between the minimum permissible ambient temperature and -20 °C.

Mount the device with at least a degree of protection of IP20 according to IEC/EN 60529.

8. Operation, Maintenance, Repair

Observe the special conditions.

Safety-relevant markings are found on the nameplate of the device or the nameplate supplied.

Do not use a damaged or polluted device.

Do not repair, modify, or manipulate the device.

Modifications are permitted only if approved in this instruction manual.

If there is a defect, always replace the device with an original device.

Do not remove the warning markings.

8.1. Requirements for Usage as Intrinsically Safe Apparatus

Only operate the device with intrinsically safe circuits according to IEC/EN 60079-11.

The type of protection is determined by the connected intrinsically safe circuit.

8.2. Requirements for Equipment Protection Level Gb

Observe the temperature table for the corresponding equipment protection level in the certificate.

Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.

8.3. Requirements for Equipment Protection Level Da

Observe the temperature table for the corresponding equipment protection level in the certificate.

Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.
8.4. Requirements for Equipment Protection Level Mb

Observe the temperature table for the corresponding equipment protection level in the certificate.
Also observe the maximum permissible ambient temperature stated in the technical data. Keep to the lower of the two values.

9. Delivery, Transport, Disposal

Check the packaging and contents for damage.
Check if you have received every item and if the items received are the ones you ordered.
Keep the original packaging. Always store and transport the device in the original packaging.
Store the device in a clean and dry environment. The permitted ambient conditions must be considered, see datasheet.
Disposing of device, packaging, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.
## Technical Data

### General specifications
- Rated operating distance $s_n$: 10 mm
- Installation: non-flush
- Output polarity: NAMUR
- Assured operating distance $s_a$: 0 ... 10 mm
- Output type: 2-wire

### Nominal ratings
- Nominal voltage $U_o$: 8 V
- Switching frequency $f$: 0 ... 1000 Hz
- Hysteresis $H$: typ. 5%

### Current consumption
- Measuring plate not detected: ≥ 3 mA
- Measuring plate detected: ≤ 1 mA

### Ambient conditions
- Ambient temperature: -40 ... 100 °C (-40 ... 212 °F)
- Also observe the maximum permissible ambient temperature stated in the data for application in connection with hazardous areas. Keep to the lower of the two values.

### Mechanical specifications
- Connection type: cable silicone, 10 m
- Core cross-section: 0.75 mm²
- Housing material: PBT
- Sensing face: PBT
- Degree of protection: IP68
- Cable Bending radius: > 10 x cable diameter

### General information
- Use in the hazardous area: see instruction manuals
- Compliance with standards and directives
  - Standard conformity
    - NAMUR EN 60947-5-6:2000
    - IEC 60947-5-6:1999
  - Standards

Declaration of Conformity

Pepperl+Fuchs
Pepperl+Fuchs
Model Number
KFU8-DW-1.D-Y209869
Evaluation unit

Features
- Rotational speed monitoring up to 10 kHz
- 1 pre-select value with relay output and LED indicator
- Multi-range power pack
- NAMUR sensors connectable
- Adjustable start-up override
- Menu driven operation via 4 front keys
- Period measurement

Function

The KFU8-DW-1.D Speed Monitor is a device used to indicate and monitor periodic signals (frequencies and rotational speeds) which occur in almost all areas of automation and process engineering. The input signals are evaluated in accordance with the cycle method. That is, by measuring the duration of a period and then converting it with a very fast microcontroller to a frequency or rotational speed.

The Speed Monitor can be supplied with 115 V AC, 230 V AC or by a 24 V DC supply and when connected to an alternating voltage it provides a 24 V DC source to supply the signal sensor.

Refer to “General Notes Relating to Pepperl+Fuchs Product Information”.

Group, category, type of protection, temperature classification

The exact designation of the device can be found on the name plate on the device side.

Pepperl+Fuchs GmbH
Lilienthalstrasse 200, 68307 Mannheim, Germany

Target Group, Personnel
Responsibility for planning, assembly, commissioning, operation, maintenance, and disconnecting lies with the plant operator.
Mounting, installation, commissioning, operation, maintenance and dismounting of the device may only be carried out by appropriate trained and qualified personnel. The instruction manual must be read and understood.
Prior to using the device you should make yourself familiar with the device and carefully read the instruction manual.

Reference to Further Documentation
Observe laws, standards, and directives applicable to the intended use and the operating location.
The corresponding datasheets, declarations of conformity, EC-type-examination certificates, certificates and control drawings if applicable supplement this document. You can find this information under www.pepperl-fuchs.com.

Intended Use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.
The device is used in control and instrumentation technology (C&I technology) for the galvanic isolation of signals such as 20 mA and 10 V standard signals or alternatively for adapting or standardizing signals.
The device has intrinsically safe circuits that are used for operating intrinsically safe field devices in hazardous areas.
Use the device only within the specified ambient conditions.
The device is designed for mounting on a 35 mm DIN mounting rail according to EN 60715.
Only use the device stationary.
The device is an associated apparatus according to IEC/EN 60079-11.
The device is an electrical apparatus for hazardous areas of Zone 2.

Improper Use
Protection of the personnel and the plant is not ensured if the device is not being used according to its intended use.
The device is not suitable for isolating signals in power installations unless this is noted separately in the corresponding datasheet.

Mounting and Installation
Do not mount a damaged or polluted device.
Mount the device in a way that the device is protected against mechanical hazard. Mount the device in a surrounding enclosure for example.
Do not mount the device in the dust hazardous area.
The device fulfills a degree of protection IP20 according to IEC/EN 60529.
The device is an electrical apparatus for hazardous areas of Zone 2.

Improper Use
The device is isolated barriers for Zone 2.
The device is an associated apparatus according to IEC/EN 60079-11.
The device is designed for mounting on a 35 mm DIN mounting rail according to EN 60715.

Improper Use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.

Requirements for Cables and Connection Lines
Observe the maximum peak values with regard to explosion protection (verification of intrinsic safety). Observe the standards IEC/EN 60079-14 or IEC/EN 60079-25.

1. Switch off the voltage.
2. Connect the terminal blocks or disconnect the terminal blocks.

Requirements for Usage as Associated Apparatus
If circuits with type of protection Ex i are operated with non-intrinsically safe circuits, they must no longer be used as circuits with type of protection Ex i.

Intrinsically safe circuits of associated apparatus can be led into hazardous areas. Observe the compliance of the separation distances to all non-intrinsically safe circuits according to IEC/EN 60079-14.
Observe the compliance of the separation distances between two adjacent intrinsically safe circuits according to IEC/EN 60079-14.

When connecting intrinsically safe devices with intrinsically safe circuits of associated apparatus, observe the maximum peak values with regard to explosion protection (verification of intrinsic safety). Observe the standards IEC/EN 60079-14 or IEC/EN 60079-25.

1. Switch off the voltage.
2. Connect the terminal blocks or disconnect the terminal blocks.

Improper Use
The device is isolated barriers for Zone 2.
The device is an associated apparatus according to IEC/EN 60079-11.
The device is designed for mounting on a 35 mm DIN mounting rail according to EN 60715.

Improper Use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.
Features

- 2-channel isolated barrier
- 24 V DC supply (Power Rail)
- Dry contact or NAMUR inputs
- Passive transistor output, non-polarized
- Line fault detection (LFD)
- Reversible mode of operation
- Up to SIL 2 acc. to IEC 61508

Function

This isolated barrier is used for intrinsic safety applications. It transfers digital signals (NAMUR sensors/mechanical contacts) from a hazardous area to a safe area.

Each proximity sensor or switch controls a passive transistor output for the safe area load. The normal output state can be reversed using switch S1 for channel I and switch S2 for channel II. Switch S3 enables or disables line fault detection of the field circuit.

During an error condition, the transistors revert to their de-energized state and LEDs indicate the fault according to NAMUR NE44.

A unique collective error messaging feature is available when used with the Power Rail system.

Connection

### Input

| **Connection**       | terminals 1+, 2+, 3-, 4+, 5+, 6-      |
| **Rated values**     | acc. to EN 60947-5-6 (NAMUR), see system description for electrical data |
| **Open circuit voltage/short-circuit current** | approx. 8 V DC / approx. 8 mA |
| **Switching point/switching hysteresis** | 1.2 ... 2.1 mA / approx. 0.2 mA |
| **Line fault detection** | breakage $I \leq 0.1 \text{ mA}$, short-circuit $I > 6 \text{ mA}$ |

### Output

| **Connection**       | output I: terminals 7, 8 ; output II: terminals 8, 9 |
| **Switching voltage**| $\leq 30 \text{ V}$                          |
| **Switching current**| $\leq 100 \text{ mA}$, short-circuit protected |
| **Signal level**     | 1-signait: switching voltage - 2.5 V max. at 10 mA switching current or 3 V max. at 100 mA switching current 0-signait: switched off (off-state current $\leq 10 \mu\text{A}$) |
| **Output I, II**     | signal ; electronic output, passive |

### Transfer characteristics

| **Switching frequency** | $\leq 5 \text{ kHz}$ |

### Electrical isolation

| **Input/Output**       | reinforced insulation acc. to IEC 62103, rated insulation voltage $300 \text{ V}_{\text{rms}}$ |
| **Input/power supply** | reinforced insulation acc. to IEC 62103, rated insulation voltage $300 \text{ V}_{\text{rms}}$ |
| **Output/power supply**| basic insulation according to IEC 62103, rated insulation voltage $50 \text{ V}_{\text{eff}}$ |
| **Input/input**        | not available |
| **Output/Output**      | not available |

### Directive conformity

**Electromagnetic compatibility**

| **Directive 2014/30/EU** | EN 61326-1:2013 (industrial locations) |

**Conformity**

| **Electrical isolation** | IEC 62103:2003 |
| **Electromagnetic compatibility** | NE 21:2004 |
| **Degree of protection** | IEC 60529:2001 |
| **Input** | EN 60947-5-6:2000 |

### Ambient conditions

| **Ambient temperature** | $-20 \ldots 60 \, ^\circ \text{C} \ (-4 \ldots 140 \, ^\circ \text{F})$ |

### Mechanical specifications

| **Degree of protection** | IP20 |
| **Mass** | approx. 150 g |
| **Dimensions** | $20 \times 119 \times 115 \text{ mm} (0.8 \times 4.7 \times 4.5 \text{ in})$ , housing type B2 |
| **Mounting** | on 35 mm DIN mounting rail acc. to EN 60715:2001 |

### Data for application in connection with Ex-areas

**EC-Type Examination Certificate**

| **Group, category, type of protection** | PTB 00 ATEX 2035 |
| **Input** | Ex ia IIC, Ex ia IIIC |
| **Voltage** | $U_o = 10.5 \text{ V}$ |
| **Current** | $I_o = 13 \text{ mA}$ |
| **Power** | $P_o = 34 \text{ mW}$ (linear characteristic) |
| **Supply** | $U_m = 40 \text{ V DC}$ (Attention! The rated voltage can be lower.) |

**Output**

| **Group, category, type of protection** | DMT 01 ATEX E 133 |
| **Statement of conformity** | TÜV 99 ATEX 1499 X |
| **Input** | safe electrical isolation acc. to IEC/EN 60079-11, voltage peak value $375 \text{ V}$ |
| **Input/power supply** | safe electrical isolation acc. to IEC/EN 60079-11, voltage peak value $375 \text{ V}$ |
### Technical data

#### Directive conformity

#### International approvals
- **FM approval**
  - Control drawing: 116-0035
- **CSA approval**
  - Control drawing: 116-0047
- **IECEx approval**
  - IECEx PTB 05.0011
  - Approved for: [Ex ia] IIIC, [Ex ia] I, [Ex ia] IIIC

#### General information
- **Supplementary information**: EC-Type Examination Certificate, Statement of Conformity, Declaration of Conformity, Attestation of Conformity and instructions have to be observed where applicable. For information see [www.pepperl-fuchs.com](http://www.pepperl-fuchs.com).
Power feed module KFD2-EB2
The power feed module is used to supply the devices with 24 V DC via the Power Rail. The fuse-protected power feed module can supply up to 150 individual devices depending on the power consumption of the devices. Collective error messages received from the Power Rail activate a galvanically-isolated mechanical contact.

Power Rail UPR-03
The Power Rail UPR-03 is a complete unit consisting of the electrical insert and an aluminium profile rail 35 mm x 15 mm. To make electrical contact, the devices are simply engaged.

Profile Rail K-DUCT with Power Rail
The profile rail K-DUCT is an aluminum profile rail with Power Rail insert and two integral cable ducts for system and field cables. Due to this assembly no additional cable guides are necessary.

Power Rail and Profile Rail must not be fed via the device terminals of the individual devices!

Instruction Manual

Marking

K-System, Isolated barriers
Device identification
Model number
ATEX approval

Group, category, type of protection, temperature classification

The exact designation of the device can be found on the name plate on the device side.

Pepperl+Fuchs GmbH
Lilienthalstrasse 200, 68307 Mannheim, Germany

Target Group, Personnel
Responsibility for planning, assembly, commissioning, operation, maintenance, and dismounting lies with the plant operator.

Mounting, installation, commissioning, operation, maintenance and dismounting of the device may only be carried out by appropriate trained and qualified personnel. The instruction manual must be read and understood.

Prior to using the device you should make yourself familiar with the device and carefully read the instruction manual.

Reference to Further Documentation
Observe laws, standards, and directives applicable to the intended use and the operating location.

The corresponding datasheets, declarations of conformity, EC-type-examination certificates, certificates and control drawings if applicable supplement this document. You can find this information under www.pepperl-fuchs.com.

Intended Use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.

The device is used in control and instrumentation technology (C&I technology) for the galvanic isolation of signals such as 20 mA and 10 V standard signals or alternatively for adapting or standardizing signals.

The device has intrinsically safe circuits that are used for operating intrinsically safe field devices in hazardous areas.

Use the device only within the specified ambient conditions.

The device is designed for mounting on a 35 mm DIN mounting rail according to EN 60715.

Only use the device stationary.

The device is an associated apparatus according to IEC/EN 60079-11.

Improper Use
Protection of the personnel and the plant is not ensured if the device is not being used according to its intended use.

The device is not suitable for isolating signals in power installations unless this is noted separately in the corresponding datasheet.

Mounting and Installation
Do not mount a damaged or polluted device.

Mount the device in a way that the device is protected against mechanical hazard. Mount the device in a surrounding enclosure for example.

The device must be installed outside of the hazardous area.

The device fulfills a degree of protection IP20 according to IEC/EN 60529.

The device must be installed outside of the hazardous area.

The device fulfills a category II (or better) according to IEC/EN 60664-1.

All circuits connected to the device must comply with the overvoltage category II (or better) according to IEC/EN 60664-1.

Only use power supplies that provide protection against electric shock (e. g. SELV or PELV) for the connection to power feed modules.

Observe the installation instructions according to IEC/EN 60079-14.

Requirements for Cables and Connection Lines
Observe the following points when installing cables and connection lines:

Observe the permissible core cross-section of the conductor.

If you use stranded conductors, crimp wire end ferrules on the conductor ends.

Use only one conductor per terminal.

When installing the conductors the insulation must reach up to the terminal.

Observe the tightening torque of the terminal screws.

If the rated voltage is greater than 50 V AC, proceed as follows:

1. Switch off the voltage.

2. Connect the terminal blocks or disconnect the terminal blocks.

Requirements for Usage as Associated Apparatus
If circuits with type of protection Ex i are operated with non-intrinsically safe circuits, they must no longer be used as circuits with type of protection Ex i.

Intrinsically safe circuits of associated apparatus can be led into hazardous areas. Observe the compliance of the separation distances to all non-intrinsically safe circuits according to IEC/EN 60079-14.

Observe the compliance of the separation distances between two adjacent intrinsically safe circuits according to IEC/EN 60079-14.

Observe the maximum values of the device, when connecting the device to intrinsically safe apparatus.

When connecting intrinsically safe devices with intrinsically safe circuits of associated apparatus, observe the maximum peak values with regard to explosion protection (verification of intrinsic safety). Observe the standards IEC/EN 60079-14 or IEC/EN 60079-25.

If no \( L_o \) and \( C_o \) values are specified for the simultaneous appearance of lumped inductances and capacitances, the following rule applies:

- The specified value for \( L_o \) and \( C_o \) is used if one of the following conditions applies:
  - The circuit has distributed inductances and capacitances only, e. g., in cables and connection lines.
  - The total value of \( L_o \) (excluding cable) of the circuit is < 1 % of the specified \( L_o \) value.
  - The total value of \( C_o \) (excluding cable) of the circuit is < 1 % of the specified \( C_o \) value.
- A maximum of 50 % of the specified value for \( L_o \) and \( C_o \) is used if the following condition applies:
  - The total value of \( L_o \) (excluding cable) of the circuit is ≥ 1 % of the specified \( L_o \) value.
  - The total value of \( C_o \) (excluding cable) of the circuit is ≥ 1 % of the specified \( C_o \) value.
- The reduced capacitance for gas groups I, IIA and IIB must not exceed the value of 1 µF (including cable).
- The reduced capacitance for gas group IIC must not exceed the value of 600 nF (including cable).

If more channels of one device are connected in parallel, ensure the parallel connection is made directly at the terminals of the device. When verifying the intrinsic safety, observe the maximum values for the parallel connection.

Operation, Maintenance, Repair
The devices must not be repaired, changed or manipulated. If there is a defect, the product must always be replaced with an original device.

If the rated voltage is greater than 50 V AC, proceed as follows:

1. Switch off the voltage.

2. Connect the terminal blocks or disconnect the terminal blocks.

Delivery, Transport, Disposal
Check the packaging and contents for damage.

Check if you have received every item and if the items received are the ones you ordered.

Always store and transport the device in the original packaging.

Store the device in a clean and dry environment. The permitted ambient conditions (see datasheet) must be considered.

If the device is used as a component of a device, the respective manufacturer must be informed.

Always store and transport the device in the original packaging.

Disposing of device, packaging, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.

Improper Use
Protection of the personnel and the plant is not ensured if the device is not being used according to its intended use.

The device is not suitable for isolating signals in power installations unless this is noted separately in the corresponding datasheet.

Mounting and Installation
Do not mount a damaged or polluted device.

Mount the device in a way that the device is protected against mechanical hazard. Mount the device in a surrounding enclosure for example.

The device must be installed outside of the hazardous area.

The device fulfills a degree of protection IP20 according to IEC/EN 60529.

The device must be installed outside of the hazardous area.

The device fulfills a category II (or better) according to IEC/EN 60664-1.

All circuits connected to the device must comply with the overvoltage category II (or better) according to IEC/EN 60664-1.

Only use power supplies that provide protection against electric shock (e. g. SELV or PELV) for the connection to power feed modules.

Observe the installation instructions according to IEC/EN 60079-14.

Requirements for Cables and Connection Lines
Observe the following points when installing cables and connection lines:

Observe the permissible core cross-section of the conductor.

If you use stranded conductors, crimp wire end ferrules on the conductor ends.

Use only one conductor per terminal.

When installing the conductors the insulation must reach up to the terminal.

Observe the tightening torque of the terminal screws.

If the rated voltage is greater than 50 V AC, proceed as follows:

1. Switch off the voltage.

2. Connect the terminal blocks or disconnect the terminal blocks.

Requirements for Usage as Associated Apparatus
If circuits with type of protection Ex i are operated with non-intrinsically safe circuits, they must no longer be used as circuits with type of protection Ex i.

Intrinsically safe circuits of associated apparatus can be led into hazardous areas. Observe the compliance of the separation distances to all non-intrinsically safe circuits according to IEC/EN 60079-14.

Observe the compliance of the separation distances between two adjacent intrinsically safe circuits according to IEC/EN 60079-14.

Observe the maximum values of the device, when connecting the device to intrinsically safe apparatus.

When connecting intrinsically safe devices with intrinsically safe circuits of associated apparatus, observe the maximum peak values with regard to
Features

- 2-channel isolated barrier
- 230 V AC supply
- Dry contact or NAMUR inputs
- Passive transistor output, non-polarized
- Line fault detection (LFD)
- Reversible mode of operation
- Up to SIL 2 acc. to IEC 61508

Function

This isolated barrier is used for intrinsic safety applications. It transfers digital signals (NAMUR sensors/mechanical contacts) from a hazardous area to a safe area.

Each proximity sensor or switch controls a passive transistor output for the safe area load. The normal output state can be reversed using switch S1 for channel I and switch S2 for channel II. Switch S3 enables or disables line fault detection of the field circuit.

During an error condition, the transistors revert to their de-energized state and LEDs indicate the fault according to NAMUR NE44.

Connection

Assembly

- LED yellow: Transistor output I
- LED red: LB/SC channel I
- LED yellow: Transistor output II
- LED red: LB/SC channel II
- Switch S1 (Mode of operation channel I)
- Switch S2 (Mode of operation channel II)
- Switch S3 (LB/SC-monitoring)
- Removable terminals blue
- Removable terminals green
- Power supply

SIL 2
