

Managing doctor blades the easy way

Blade Inventory Management System

The management of doctor blades is extremely time-consuming due to the constant monitoring of the stock, updating of inventory lists and ordering processes. Voith therefore offers the unique “Blade Inventory Management System.”

With the “Blade Inventory Management System,” the management of the doctor blade stock is now fully automated and works without any manual counting. Thanks to digitalization, the stock level is transparent 24/7 and the re-supply of new blades works automatically.

The Blade Inventory Management System is also a module of the OnCare.pmPortal asset management tool. With OnCare.pmPortal, paper manufacturers have everything under control and all data are available online. Everywhere and everytime.

The Blade Inventory Management System is another step toward higher efficiency and digitalization for our customers, thanks to Voith Doctoring Solutions.

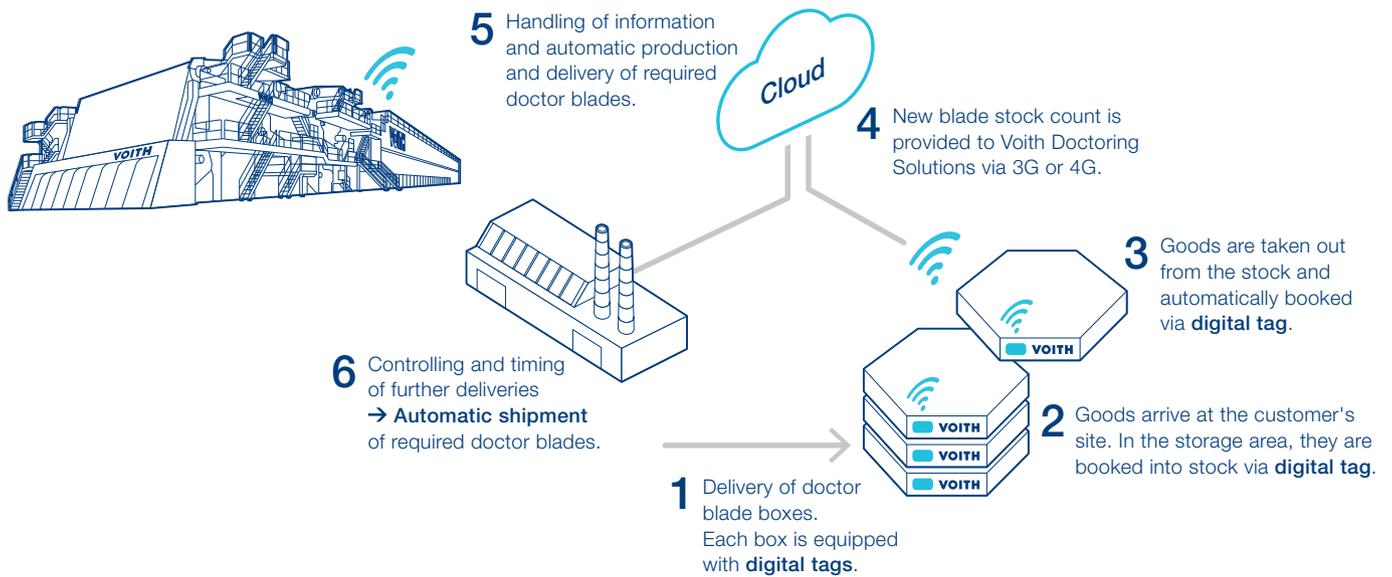

How does it work?

With the unique "Blade Inventory Management System," there are no more manual tasks to be performed. Whenever you remove a blade box, the stock level is automatically updated through the system, all without the time-consuming filling out of lists or scanning of barcodes. The information provided by the Blade Inventory Management System leads to an automated reproduction and delivery of blades. The actual doctor blade stock is always visible on the OnCare.pmPortal.

Benefits

- + Automatic re-supply of doctor blades
- + No administration efforts
- + Online stock overview
