**VOITH**

**Reliable and efficient  
products and services  
for your application**  
**Power generation**

Dear Customer,

Voith is one of the largest 100% family-owned companies in Europe and was founded in 1867. We pride ourselves on our solid culture, company values and principles that have seen and weathered change whilst in operation for over 150 years. During this time, we have grown, introduced groundbreaking innovations and established long-lasting customer relations on a global scale.

Voith Turbo Industry specializes in industrial drive solutions for the mining, oil & gas, power, steel, petro-chemical and hydraulic markets. We have a deep understanding of your applications and always offer the right solution that will maximize your success. We are, wherever you and your customers are.

Globally orientated and locally in action, we have sites, service and sales offices in more than 60 countries attending to our customers. Tailoring our products and services to the specific needs of your local market, our people are familiar with working in cross-functional, intercultural teams across the globe.

Innovative solutions combined with the highest quality is at the heart of our operation. When looking for safe, efficient and highly productive solutions combined with the highest availability and operating at the lowest cost, Voith Turbo, Industry is your perfect partner.

Everyday offers new challenges. We help you to master them successfully with inspiring technology that will delight current and future industrial generations. Anytime. Anywhere.

Sincerely,

A handwritten signature in blue ink, appearing to read 'R. Schweizer', with a stylized flourish at the end.

Rolf Schweizer

Executive Vice President & CEO Industry

# Product and service portfolio

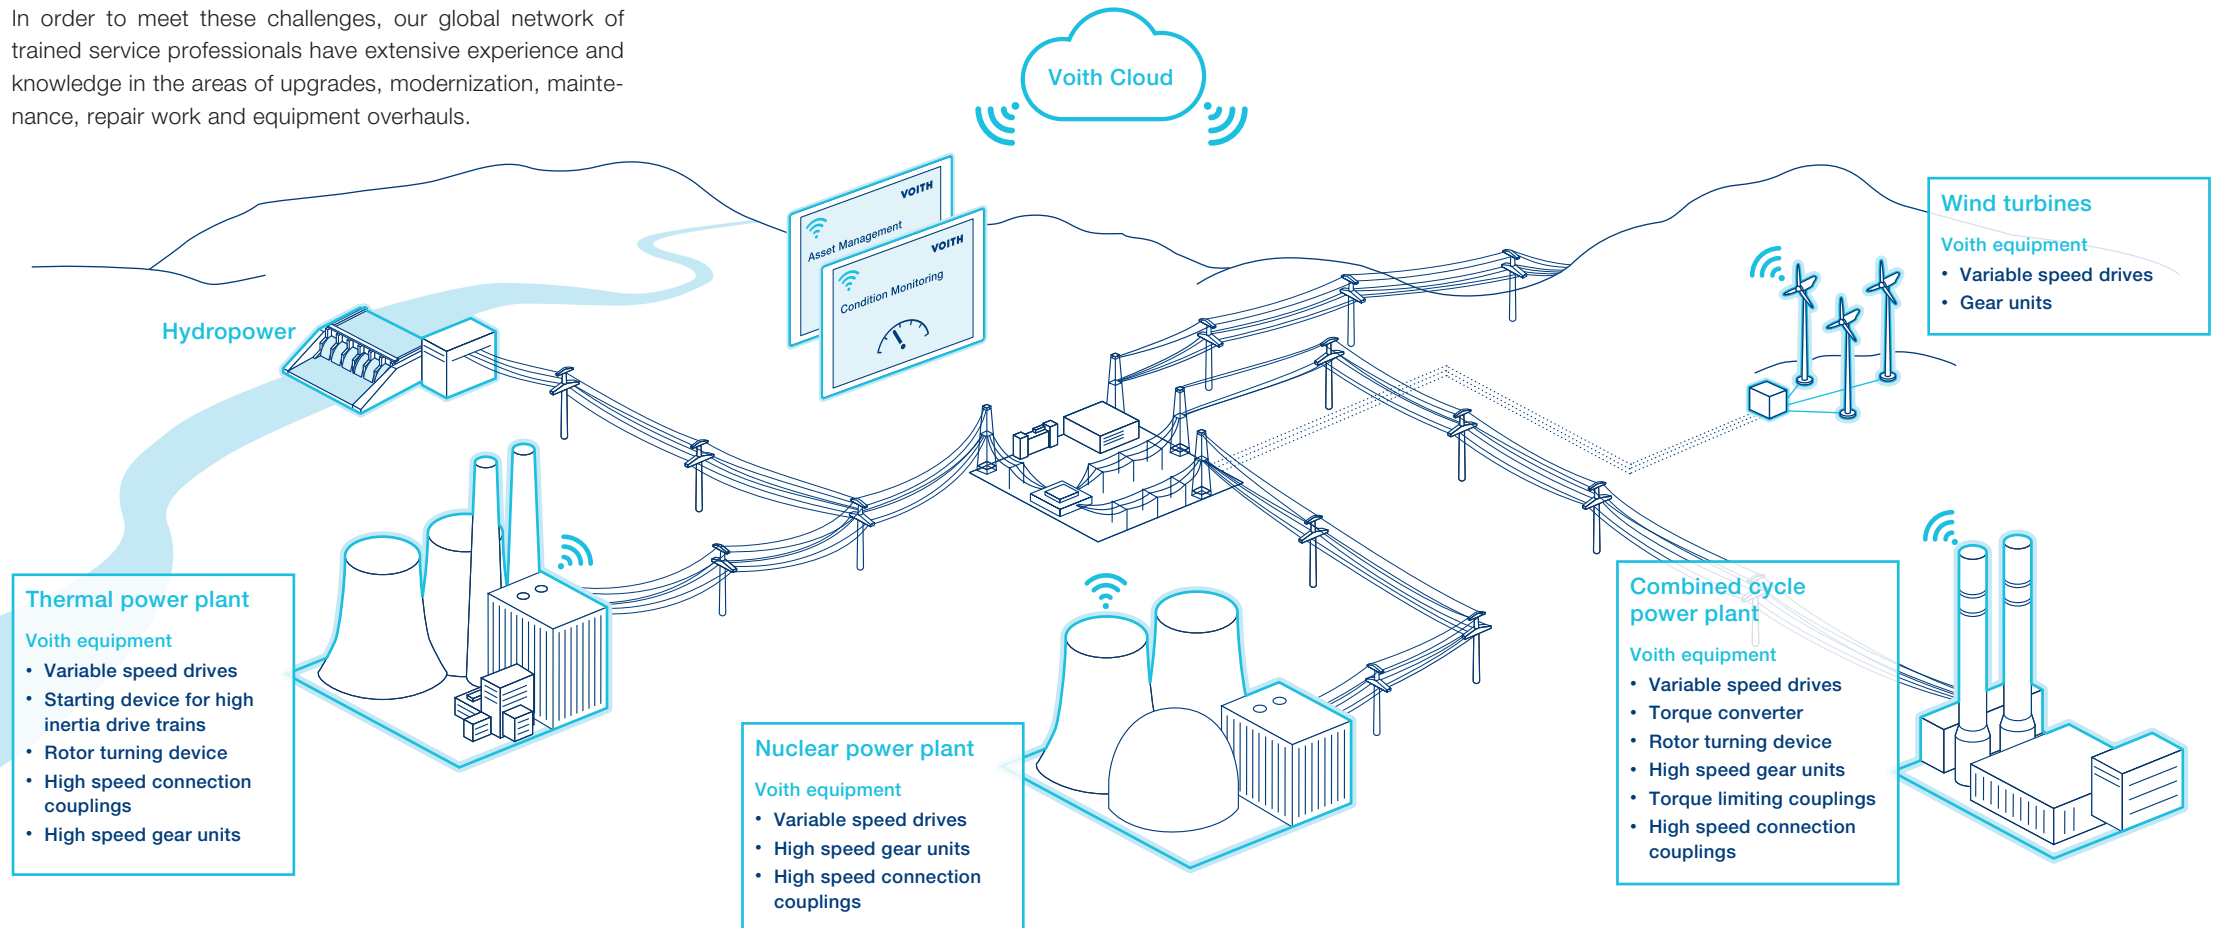

## Power generation

Voith products and services are found in innumerable applications within the power industry, be it hydropower, wind power, nuclear power or thermal power. However, regardless of the type of power plant each has its own challenges: safer processes, energy savings, reducing running costs and, last but not least, efficient ways to increase overall operational performance.

In order to meet these challenges, our global network of trained service professionals have extensive experience and knowledge in the areas of upgrades, modernization, maintenance, repair work and equipment overhauls.

Ensuring your future success, is our priority. Using our video collaboration equipment VOCUS, our service professionals can be called upon 24/7 to guide your experts on-site and solve the problem immediately. Furthermore, our products are equipped with condition monitoring systems offering a sustainable way to decrease unplanned downtime and improve machinery efficiency.

Working together, we optimize your operations by offering you consultation services when planning your drive system. What's more, torsional vibration calculations combined with analysis, strength calculations and retrofit services for electronic variable speed drives (VFD's) all form part of our broader portfolio.
