OnEfficiency.DriverAssist

Reducing fuel consumption – Improving driving behaviour

OnEfficiency.DriverAssist

Fuel is not getting cheaper. This makes it a crucial item in operating costs. With OnEfficiency.DriverAssist we offer you a holistic platform to reduce the fuel consumption of your fleet by motivating your drivers to a safe and economical driving style.

OnEfficiency.DriverAssist consists of two major components:

For the driver: OnEfficiency.DriverAssist Live

DriverAssist Live supports the driver during the trip and provides summaries for track sections at the bus stops.

For the management: OnEfficiency.DriverAssist Fleet

DriverAssist Fleet contains all necessary reporting features to get a fast overview of the total fleet performance.

OnEfficiency.DriverAssist Live

While driving

OnEfficiency.DriverAssist Live, using a display at the driver's position, supplies real-time feedback on:

- Acceleration
- Deceleration
- Idling
- Section performance (at the bus stop)

Support is provided by a combined display that visualizes both the current value and the recommended range of values. This allows the driver to adapt the driving style to the current traffic situation. A fair assessment of the driver's performance is possible by taking into account route and vehicle-specific parameters.

Between the sections, the driver receives a summary feedback, which informs about the actual performance.

OnEfficiency.DriverAssist Fleet

OnEfficiency.DriverAssist Fleet supplies managers with daily updated balance sheets on fuel consumption and performance trends. The effectiveness of OnEfficiency.DriverAssist can be tracked and deviations can be counteracted by appropriate actions.

Fairness

OnEfficiency.DriverAssist evaluates the efficiency performance without being biased by topography, vehicle types or traffic situations.

Administration

OnEfficiency.DriverAssist Fleet provides an intuitive interface to manage all existing users and vehicles.

Data privacy and security

Data security and data protection are taken very seriously at Voith. Not only that we place the highest demands on our IT solutions, we go one step further.

So in OnEfficiency.DriverAssist we use an Avatar system which anonymizes the data of all drivers and protects the privacy of each user.

Experience that pays off

The many years of experience of our driving and service trainers together with that of our driveline experts contributed to the development of the OnEfficiency.DriverAssist platform.

Voith is your reliable partner

- + Over 50 years of experience in the bus market
 - + More than 300,000 transmissions sold form the basis of our consulting and service competence in the areas of driveline design and optimization, together with OEMs and end customers
 - + Driver trainings
 - + Service trainings
 - + Preventive maintenance and services
 - + Service and LCC contracts make it possible for you to operate your fleet at maximum availability and minimum cost
