

Process Line Package for tissue

All components from one source

Better cost control and fewer interfaces

Rising operating costs, scarce and expensive resources, as well as high investment costs for new projects make the investment decision for a tissue production line difficult. There is no room for delays or mistakes during the project cycle, from the initial idea to the completion of the new facility, as they could jeopardize the scheduled start-up of the production line.

For this reason, Voith developed the Process Line Package, thus taking full responsibility for the customer's new project.

As a general contractor and expert in the entire tissue manufacturing process, Voith ensures that the facility goes into operation safely and by the agreed deadline.

Voith takes sole responsibility for every section of the entire process line. The customer therefore has only one contact and significantly fewer interfaces. With the Process Line Package for tissue, the entire project cost is established before start-up. With traditional projects, total costs are revealed over time and only available much later in the process.

Advantages Process Line Package for tissue

- + Only one contracted supplier is responsible for the quality and production of the entire plant
- + Attractive cost benefits and significantly lower investment risks
- + Reduction of consultancy, engineering and management costs
- + Excellent process and technological management due to worldwide experience
- + Full control over the project's time schedule
- + Tax benefits included in the Process Line Package
- + Partnership allows direct evaluation of the capital employed and the entire project cost
- + Well-defined limits of supply
- + Performance guarantee on all equipment supplied

Typical scope of supply Process Line Package for tissue

- Pre-engineering, basic and detailed engineering
- General layout of the tissue plant
- Compressed air system
- Vacuum system
- Electrical equipment
- Instrumentation
- Compressors
- Field piping and pipelines
- Pumps and valves
- Tanks and towers
- Preparation system for chemical additives
- Travelling cranes, hoists and monorails
- Electromechanical installations and management of construction work

Process Line Package: Voith takes responsibility for the entire tissue mill project
